INDUSTRY EXPERIENCE

Google DeepMind

London, UK

Senior Software Engineer, Gemini Human Data + Agents + Post-Training

Feb 2024 - Present

- Currently working on AGI evals and online RL pipelines (**Python/C++**) in Gemini's Agents Area
- Led a effort (IC + TL for 5 SWEs, 2+ Ops) building tooling (**C++/TypeScript**) for a **step-change in post-training human data quality** that **unblocked online RL capabilities** and reduced data rejection rates by 10+%, by standardising 5+ human data vendors' quality/data science capabilities onto our first-party platform
- Platform support (**C++**) enabling Gemini post-training research scientists to gather human data at scale (100K+ data points), for capabilities including safety and assurance, agents and audio
- Led a workstream (IC + TL incl. management hat for 3-5 SWEs) for data management and governance on Gemini's Human Data team, focused on data provenance and EU Digital Markets Act compliance
- Kindled a cross-Google workstream to urgently build infrastructure and processes for lineage and machine-attested data cards for a step-change in model launch governance and regulatory compliance

Monzo

London, UK

Backend Engineer, Platform

Jul 2023 - Feb 2024

- Large-scale re-architecting of a core payments platform (a multi-stage microservices pipeline backed by Go and Kafka) to help teams iterate faster, built in a tight, collaborative feedback loop with a product team's sprint to launch a suite of industry-leading, user-facing security features

Google

London, UK

Software Engineer (L4), Search (Product) and Health (Platform)

Oct 2021 - Jul 2023

- Re-architected automation (**Python**) behind Google for Clinicians' data ingest pipeline, reducing time for features and data to reach clinicians and data scientists by five days
- Launched experiments in high-velocity UXR-SWE sprints of a complete re-design of the Google Search homepage with a novel, media-first experience for low literacy users in India

Prior internships include Google Search (2020), **DeepMind Health** (*Streams*, used by the Royal Free Hospital, 2019), Bloomberg (2018), Artificial Labs (2017).

TRUSTEE, GOVERNANCE AND VOLUNTEERING EXPERIENCE

Trustee, Youth Careers Collective (formerly Spark!)

Aug 2021 - Present

- Key contributor to improving governance of a grant-funded charity supporting young people's employment outcomes, providing fresh scrutiny during its rapid growth from £100k ARR to £800k+
- Provided a key voice in the board's transition to a medium-sized charity, driving step-changes to governance and financial controls (interviewing for a new chair, tightening reserves policy and risk register practices) and wider operational areas (safeguarding, employee retention)

Student Trustee, Imperial College Union

Jul 2020 - Aug 2021

- Appointed student trustee on Board of Trustees of a £10mm turnover charity with 17,000 members
- Contributed to the student union's *Back to Basics* strategy, after a period of stagnation where the organisation could not effectively meet the operational demands of hundreds of student societies

President, Imperial College Department of Computing Society

Aug 2018 - Jul 2020

- Led a committee of sixteen and liaised with stakeholders across the university and student union to enable the society's volunteers to make a lasting impact on its 1,400 members
- Organised IC Hack, the UK's largest student-run hackathon, with a £60k budget and 450 attendees

EDUCATION

Imperial College London

London, UK

MEng Computing, 1:1

2017 - 2021

- Distinguished project (90% in MEng thesis) and ARM Project Prize for best computer systems project; awarded the IET Diamond Jubilee Scholarship (2017-20)
- Master's thesis applying control theory and profiling techniques to demonstrate self-adaptive load shedding (**Go**) in Kubernetes clusters under high load. Built a load testing bench using TypeScript to show 22% improvement in metrics over prior work. Presented in office hours with Grafana.

SKILLS & INTERESTS

Selected Technical Skills – Experienced with Python (**code style reviewer, interview-trained** at Google), C++, Go, and Java. Familiar with TypeScript, and Dart. Familiar with distributed systems and microservices-based architecture (hosted Distributed Data track at O'Reilly Velocity '18 Conference).

Extracurriculars – Running, chamber choir, photography, and reading.
